

FOCUS ON YOUR TREATMENT

The **unique combination** of LaseMD / LaseMD Ultra laser effectiveness with a concentrated cosmeceutical **specifically adapted to your needs**.

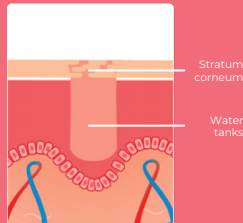

1

The laser targets the water mainly present in the epidermis. When heated, this water evaporates from the tissue, inducing the formation of microchannels that are imperceptible to the eye.

2

The generated heat stimulates the synthesis of new collagen to improve skin quality and fight the signs of aging.

3

A serum dedicated to your needs (Vitamin C, Tranexamic Acid, Resveratrol or Vitamin A (retinol)) is then applied to the face. Its active ingredients will be able to penetrate deep into the tissues thanks to the microchannels created.

In this way, their action is more effective than any cosmetic that is applied only topically.

FOCUS ON YOUR PRE & POST CARE

The key antioxidants and active ingredients to enhance your overall results

THE JOURNEY TO AESTHETIC HEALTH

We understand the importance of aesthetic medicine to our patient's wellbeing. Our support offers a unique way of achieving it.

Experience Baby Face for a flawless filter effect

WHAT • What is Baby Face 30-Day Augmented Treatment?

This next-generation treatment combines the effectiveness of laser technology with the application of specific antioxidants and cosmeceuticals tailored to your skin. Baby Face has been designed to treat all superficial skin imperfections including irregular skin texture and tone, enlarged pores, superficial acne scarring, fine lines, sun damage.

WHEN • Is this treatment suitable for me?

Baby Face protocol is suitable for all ages and all skin types, whether you want to restore radiance, smooth fines or simply display 'baby skin' without imperfections.

HOW • Is this treatment comfortable?

A tingling heat sensation may be experienced during in-clinic treatment. To optimise comfort, an anaesthetic cream is applied to cleansed skin 30 minutes before treatment. At the end of the treatment, your practitioner will apply the customised ampoule that you will need to keep applying regularly for 48 hours. Finally, a dedicated cream or mask will be applied to soothe your skin and support its recovery.

HOW MANY • How many treatments are advised?

On average, three sessions are recommended. However, your practitioner will establish a treatment regimen that is tailored to your skin needs.
